LED SENSOR LIGHT
With Motion Detection

Motion sensor
LED lights

Charging port
Power/ mode switch
Switch Modes:
1. Press once to turn the light on
2. Press the second time to enter the sensing mode (the light flashes twice)
3. Press the third time to turn off the light
4. Long press (3 seconds) to enter the dimming mode

Note:
1. The motion sensor works in a low light / dark environment
2. If the switch does not respond, charge the device
3. After motion is detected the light will stay on for 20 seconds

Installation Method:
1. Install on a magnetic surface – directly attach the Sensor Light on a magnetic metal surface
2. Install on a non-magnetic surface – stick a metal piece with M3 tape (included) on a preferred surface, then attach the Sensor Light

Charging Modes:
If the LED indicator turns red, it is time to charge the Sensor Light. To do that, connect a Micro USB cable (included) to the Sensor Light and charge it until the LED indicator is green.

Note:
During charging, the sensor light will enter the always-on mode. After charging is complete, the sensor light will enter the auto-sensing mode. In order to choose a different mode, follow the instructions above.
